TECHNICAL SPECIFICATIONS

Input voltage	: 11-14 Vdc.
Power consumption	: 12V/1.1W
Operating temperature	: -10 + 80 C
Dialing mode	: DTMF/PULSE
Voice record	: 40 Sec. 6.4 Khz.
Poz. Trigger voltage	: 8-14 Vdc.
Neg. Trigger voltage	: Gnd-1.5 Vdc.
Relay voltage	: 12 Vdc. Contact 1A.
Connection cables	: 8 Pin 35 cm. female

CONNECTION CABLES

	GREEN	—	C.O.Line input T
	BROWN	—	C.O.Line input R
	PURPLE	—	C.O.Line output T
	WHITE	—	C.O.Line output R
	GREY	—	Positive (+) Trigger Input
	BLUE	—	Negative (-) Trigger Input
	BLACK	—	(-) GND.
	RED	—	(+) 12 Vdc.

INSTALLATION & PROGRAMMING

When the device connections are made and energy is given, the green indicator light on the device gets activated. If the executed operation is correct, long beep sound indicates the affirmation, if the operation is wrong, the errors indicated through short beep sounds.

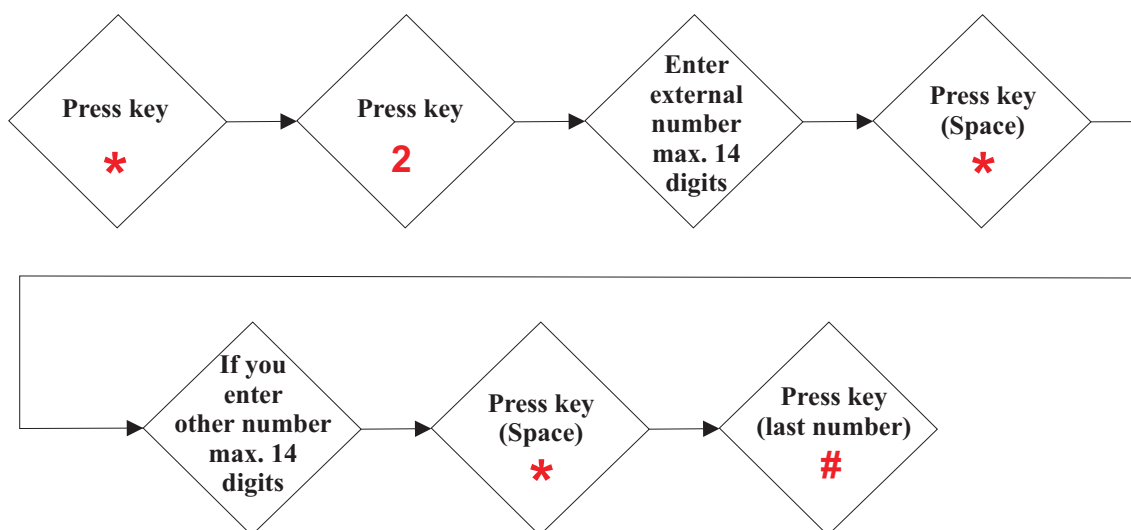

* → 1 EXTENSION NUMBER RECORD & ERASE OPERATION

If the equipment is directly connected to Post Office line, this operation can not be executed. If the equipment is connected to extension phone line and If there is a number which is used to connect to Post Office line, that number is dialed here and # key is pressed. (Max. 5 Digits)

* → 2 EXTERNAL NUMBER RECORD OPERATION

The registering of the numbers that you want the equipment to dial when it is on the alert. Dial the number that is going to be registered and press key *. You can exit with press key #

While registering any number, if you enter a wrong number, pressing the key #, enter the number again and by pressing the key *, go on with the registering operation. (Max. 114 Digit with spaces)

*** → 3 SINGLE NUMBER DELETION OPERATION**

To be able to delete any number that you registered with external number record operation, dial phone number and press key #.

Note: When we delete any registered phone number in any sequence, the dialing sequence switches to one left following the number that is deleted.

*** → 4 RESTORING FACTORY SETTINGS**

This operation deletes all the registered extension and outside phone numbers and voice message records. Don't execute this operation unless necessary.

*** → 5 THE NUMBER OF DIALING**

It determines the number of dialing operations that is going to be executed when it is on the alert. The factory settings is "2 times".

*** → 6 DIALING TYPE**

It determines the mode in which it is going to dial the number. According to factory settings, it is determined as DTMF. But if the equipment does not dial a number, switch to PULSE.

* → 7 VOICE MESSAGE LISTENING TIME

It determines how long the machine is going to make the dialed number listen to the recorded voice message. The record operates depending on the length of the message. The equipment starts to have the dialed number listen to the message 5 seconds after dialing the phone number. The factory setting is adjusted as 20 seconds.

* → 8 DIGITAL VOICE RECORD

When the red indicator light on the equipment is on, speak out loud from 15-20 cm distance. Total voice record is 40 seconds. If your voice record is over in less than 40 seconds time, you end the record operation by pressing key #

* → 9 INDEPENDENT/DEPENDENT ALARM OPERATION

It determines whether the equipment is going to dial depending on the alarm trigger or not. According to factory settings, it is determined as **independent**. **Independent**; once the alarm trigger is on, the equipment does not stop until it dials all the numbers. **Dependent**; it starts dialing when the alarm trigger is on and ceases when it is off.

* → 0 DIALING SHUTOFF OPERATION

It determines whether the dialing can be cancelled or not by using the keys on the equipment after receiving the equipment's alarm trigger. The factory setting is adjusted as **1** uncancellable.
